

## 2 UPLOAD SITE TO SERVER

Copy the files from your computer to the TQNYC server.

Every file from your project folder gets copied. Your folder is named by your Team ID. You can use the File Manager in the Dev Tools, or use a File Transfer Protocol software (FTP)\*.

## 3 VISIT YOUR SITE

Your site is now live!

Type your URL into a web browser  
<http://www.tqnyc.org/TeamID/>

This address tells your browser to go to the server (tqnyc.org) and find your folder (/TeamID/) and open index.html!

Th i n k  
Q u e s t

New York City

# WEBSITE WORKS

## 1 CREATE SITE ON YOUR COMPUTER

Your website begins as files on your computer. Create a folder for your project.

Anytime you save or create a file, put it in this folder.

All files for your website live in the same folder.

File names should be lowercase with no punctuation.

The first page of your website is called "index".

### PRACTICE MAKES PERFECT

Everybody makes mistakes! So, if your site doesn't work right away, be patient and you can fix the problem. Check that all the files have been uploaded to the server and that there is an "index.htm" page. Make any changes, then test your site again. If you're still having problems, send a message to the Help Desk.
